Senator Windows announce the launch of their Energy Scrappage Scheme for Windows and Doors

A GROWING number of people are becoming energy aware and conscious of savings that can be made; they are searching the market for the best value when it comes to installing energy efficient windows and doors. Senator Windows, who are leaders in certified energy saving products, have come up with a fantastic offer that is sure to be a big incentive to consumers to replace their old windows and doors.

To coincide with the launch of their new Senergy 'A' rated windows, Senator Windows has announced this 'Energy Scrappage Scheme.' It is the first of its kind in the window industry and is a great offer for the consumer. In a ground breaking initiative, Senator Windows will refund the customer 50 for every window or door replaced on orders received until the end of May. Senator is stepping in with this scheme because they believe that windows should have been included in the Government's grant scheme to insulate your home. This is Senator's direct response to the news that windows were not included in the Government's recently announced 'Home Energy Saving Scheme'. Windows and doors were included in the Home Energy Saving Pilot Scheme which was launched in April 2008, but when the actual Government grant scheme was launched

this year, windows were dropped from the scheme. This omission in the announcement is being seen by many as a major flaw in the scheme because in order to save energy throughout the home it is vital that all windows and doors are energy rated. 'We believe that by stepping in with our genuine scrappage scheme we can ensure that all homes can have 'A' rated windows and security-certified doors fitted at a competitive price.

Our new Senergy 'A' rated window's combine energy efficiency, elegant design, high security and affordability. We have named this window Senergy to reflect the total focus on energy rating', said John Doran Commercial Director, 'Forget about your B, C and D ratings, our new casement window range is now 'A' rated as standard, once again proving why we are the market leaders! A lot of our competitors claim that they are 'A' rated or 'Energy' rated, but they don't have an official 'A' rated certificate or energy label. Senator is registered with the BFRC and Energy Saving Trust, and in fact, all our windows are certified by the BFRC and that is the only guarantee of official energy rating.' He added that 'if a supplier claims to be energy rated the consumer should always request a copy of the official energy certificate or visit the official energy website www.bfrc.org. We only fit our highly efficient Senergy 'A' rated casement windows as standard, at no extra cost to the customer.'

Customers are invited to call Senator for a free 'no obligation quotation and survey' by calling 053 9155300 or visit our website www.senatorwindows.ie
